S. 586

To amend the Public Health Service Act to provide grants to promote positive health behaviors in women and children.

IN THE SENATE OF THE UNITED STATES

FEBRUARY 14, 2007

Mr. BINGAMAN introduced the following bill; which was read twice and referred to the Committee on Health, Education, Labor, and Pensions

A BILL

To amend the Public Health Service Act to provide grants to promote positive health behaviors in women and children.

1 *Be it enacted by the Senate and House of Representa-*
2 *tives of the United States of America in Congress assembled,*

3 **SECTION 1. SHORT TITLE.**

4 This Act may be cited as the “Community Health
5 Workers Act of 2007”.

6 **SEC. 2. FINDINGS.**

7 Congress makes the following findings:

8 (1) Chronic diseases, defined as any condition
9 that requires regular medical attention or medica-
10 tion, are the leading cause of death and disability for

1 women in the United States across racial and ethnic
2 groups.

3 (2) According to the National Vital Statistics
4 Report of 2001, the 5 leading causes of death
5 among Hispanic, American Indian, and African-
6 American women are heart disease, cancer, diabetes,
7 cerebrovascular disease, and unintentional injuries.

8 (3) Unhealthy behaviors alone lead to more
9 than 50 percent of premature deaths in the United
10 States.

11 (4) Poor diet, physical inactivity, tobacco use,
12 and alcohol and drug abuse are the health risk be-
13 haviors that most often lead to disease, premature
14 death, and disability, and are particularly prevalent
15 among many groups of minority women.

16 (5) Over 60 percent of Hispanic and African-
17 American women are classified as overweight and
18 over 30 percent are classified as obese. Over 60 per-
19 cent of American Indian women are classified as
20 obese.

21 (6) American Indian women have the highest
22 mortality rates related to alcohol and drug use of all
23 women in the United States.

24 (7) High poverty rates coupled with barriers to
25 health preventive services and medical care con-

1 tribute to racial and ethnic disparities in health fac-
2 tors, including premature death, life expectancy, risk
3 factors associated with major diseases, and the ex-
4 tent and severity of illnesses.

5 (8) There is increasing evidence that early life
6 experiences are associated with adult chronic disease
7 and that prevention and intervention services pro-
8 vided within the community and the home may less-
9 en the impact of chronic outcomes, while strength-
10 ening families and communities.

11 (9) Community health workers, who are pri-
12 marily women, can be a critical component in con-
13 ducting health promotion and disease prevention ef-
14 forts in medically underserved populations.

15 (10) Recognizing the difficult barriers con-
16 fronting medically underserved communities (pov-
17 erty, geographic isolation, language and cultural dif-
18 ferences, lack of transportation, low literacy, and
19 lack of access to services), community health work-
20 ers are in a unique position to reduce preventable
21 morbidity and mortality, improve the quality of life,
22 and increase the utilization of available preventive
23 health services for community members.

24 (11) Research has shown that community
25 health workers have been effective in significantly in-

1 creasing health insurance coverage, screening and
 2 medical follow-up visits among residents with limited
 3 access or underutilization of health care services.

4 (12) States on the United States-Mexico border
 5 have high percentages of impoverished and ethnic
 6 minority populations: border States accommodate 60
 7 percent of the total Hispanic population and 23 per-
 8 cent of the total population below 200 percent pov-
 9 erty in the United States.
